

Providing Scalable
Surveillance Solutions for
Vessels, Ports, Waterways,
and Offshore Facilities.

Radar Access Unit (RAU™)

SSR Engineering's Radar Access Unit (RAU) receives radar data over a network, creates a Radar Display Distribution System (RADDs) signal that can be connected directly to display consoles like the SPA-25.

The Radar Access Unit (RAU) can be used to replace shipboard radar switchboards by generating a SPA-25 compatible output from radar data received over a standard network.

Features:

- Allows distribution of radar data over standard network
- Utilize existing SP-25 displays with new radar systems
- Simplifies cabling for additional displays
